```

NOTICE: This sequence may not represent the entire insert of this clone. It may be shorter because we only sequence overlapping clone sections once, or longer because we provide a small overlap between neighboring data submissions.

Center project name: M_BA0098011

This sequence was finished as follows unless otherwise noted: all regions were double stranded, sequenced with an alternate chemistry, or covered by high quality data (i.e., phred quality >= 30); an attempt was made to resolve all sequencing problems, such as compressions and repeats; all regions were covered by sequence

```
Mapping information for this clone was provided by Dr. Wes Warren, Department of Genetics, Washington University, St. Louis MO. For additional information about the map position of this sequence, see
                                                                                                                                               The RPCI-23 BAC Library has been constructed by Kazutoyo Osegawa and Minako Tateno in the laboratory of Pieter de Jong (http://www.chori.org) from female C57BL/6J mouse kidney and/or brain genomic DNA. The clone and detailed information can be obtained from Research Genetics, Inc. (http://www.resgen.com) or pieter de Jong and coworkers at http://www.resgen.com) or
                                                                                                                                                                                                                                                                                                This sequence is the entire insert of the clone. This clone is overlapped by AC130544.

Baylor Plaza, Houston, TX 77030, USA.
On May 10, 2003 this sequence version replaced gi:23096531.
The sequence in this assembly is a combination of BAC based reads and whole genome shotgun sequencing reads assembled using Atlas and whole genome shotgun sequencing reads assembled using Atlas in the feature table below represents a scaffold in the Atlas assembly (a 'contig-scaffold'). Within each contig-scaffold, by sized gaps filled with Ns to the estimated size. The sequence may extend beyond the ends of the clone and there may be sequence contigs within a contig-scaffold that consist entirely of whole genome shotgun sequence reads. Both end sequences and whole genome shotgun sequence contigs will be indicated in the feature
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  * NOTE: Estimated insert size may differ from sequence length

(see http://www.hgsc.bcm.tmc.edu/docs/Genbank_draft_data.html).

* NOTE: This is a 'working draft' sequence. It currently

* consists of 1 contigs. Gaps between the contigs

* are represented as runs of N. The order of the pieces

* is believed to be correct as given, however the sizes

* of the gaps between them are based on estimates that have

* provided by the submittor.

* This sequence will be replaced

* by the finished sequence as soon as it is available and

* the accession number will be preserved.

* 1 232802. config of 232802 bp in length.

The invention relates to an isolated polymorlectide encodaing a polypeptide being timour suppressor, CRR-1. Also included are fragments of the protein confine the polymorlectide from 15-5000 nucleotides, fragments of the protein confirmation acids, an expression cassette comprising the protein polymorlectide under the control of a promoter operable in eukaryotic polymucleotide under the control of a promoter operable in eukaryotic cells, a method for suppressing growth of a cancer cells by contacting the expression cassette, an anti-CAR-1 monoclonal or comprising the expression cassette, an anti-CAR-1 monoclonal or comprising the expression cassette, an anti-CAR-1 monoclonal or comprising the phenotype of a tissue sample from a subject, methods for altering the phenotype of a tumour cell, methods for treating the phenotype of a tumour cell, methods for treating a card encoding the tumour suppressor CAR-1 and a subject with cancer by administering the tumour suppressor CAR-1, or by a subject with cancer by administering the tumour suppressor CAR-1 and a subject with cancer cells, where the promoter is operably linked to the region encoding the tumour suppressor CAR-1 and a cancinctor and timed to the region encoding the tumour suppressor CAR-1 and a concern cells, where the promoter activity by contacting a functional CAR-1 and a similar transgenic enkaryote lacking a functional CAR-1 and cells, with a candidate substance on the cell, an anti-tumour activity by contacting a cell lacking functional CAR-1 polypeptide, with a candidate substance on the cell, and anti-tumour composition and candidate substance on the cell, and public and determining the effect of the candidate substance on the cell, and candidate substance on the cell, and contacting a cell lacking functional CAR-1 polypeptide, with a candidate inhibitor substance, and making a composition and an isolated and public and the CAR-1 polypeptide, with a calcidate inhibitor substance, and making cancer of the brain, lung, liver, kidney, lump node, pancer
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     effect of mutant CAR-1 molecule. The gene for CAR-1 is located on chromosome 1 (1p31-1p36). The present sequence is the cDNA encoding CAR-1
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      New tumor suppressor CAR-1 polypeptides and polynucleotides, useful for diagnosing cancer, for altering the phenotype of a tumor cell, for treating cancers or as a diagnostic or prognostic indicator of cancer.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             The invention relates to an isolated polynucleotide encoding a

AMX AAK54951 to AAK64702 encode the human immune/haematopoietic antigen (1)
amino acid sequences given in AAM82170 to AAM91921. (1) have cytostatic
activity, and can be used in gene therapy and vaccine production. (I)
proteins and polynucleotides may be used in the prevention, diagnosis and
treatment of diseases associated with inappropriate (I) expression. For
example, they may be used to treat disorders associated with decreased
expression by rectifying mutations or deletions in a patient's genome
that affect the patients own production of (I). Additionally, (I)
supplement the patients own production of (I). Additionally, (I)
cubylandleotides may be used to produce the secreted (I), by inserting the
nucleic acids into a host cell and culturing the cell to express the
concerns and cancer metastases of haematopoietic related diseases, especially
cancers and cancer metastases of haematopoietic artice acids into a host call amount of a diseases, especially
cancers and cancer metastases of haematopoietic antigen genomic
to AAK87694 represent human immune/haematopoietic antigen genomic
sequences from the present invention. AAK54942 to AAK84950 and AAM82165
represent sequences used in the exemplification of the present invention
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         Nucleic acids encoding human immune/hematopoietic antigen polypeptides, useful for preventing, diagnosing and/or treating cancers and metastasis
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   Disclosure; SEQ ID NO 35436; 3071pp + Sequence Listing; English

New tumor suppressor CAR-1 polypeptides and polynucleotides, useful for diagnosing cancer, for altering the phenotype of a tumor cell, for treating cancers or as a diagnostic or prognostic indicator of cancer.

The invention relates to an isolated polynucleotide encoding a polypeptide being tumour suppressor, CAR-1. Also included are fragments of the polynucleotide from 15-500 nucleotides, fragments of the protein from 10-50 amino acids, an expression cassette comprising the polynucleotide under the control of a promoter operable in eukaryotic cells, a method for suppressing growth of a cancer cells by contacting comprising the expression cassette (i.e. gene therapy), a cell polyclonal antibody, a hybridoma cell that produces the monoclonal antibody, a method of diagnosing a cancer by assessing the expression of CAR-1 tumour suppressor in the cells of a tissue sample from a subject,

```
cc methods for altering the phenotype of a tumour cell, methods for treating a subject with cancer by administering the tumour suppressor CAR-1 or by administering a nucleic acid encoding the tumour suppressor CAR-1 and a promoter active in eukaryotic cells, where the promoter is operably liked to the region encoding the tumour suppressor CAR-1 and a transgenic eukaryote lacking a functional CAR-1 gene, a non-human cransgenic eukaryote lacking a functional CAR-1 gene, a non-human cransgenic eukaryote, a method of screening a candidate substance for anti-tumour activity by contacting a cell lacking functional CAR-1 gene, andidate substance on the cell, and anti-tumour composition produced by contacting a cell lacking functional CAR-1 polypeptide, with a candidate substance on the cell, and anti-tumour composition produced by contacting a cell lacking functional CAR-1 polypeptide, with a candidate substance on the cell, an isolated and purified nucleic acid that hybridizes, under high contacting a candidate inhibitor substance, and making a composition and an isolated and purified nucleic acid that hybridizes, under high string the phenotype of a tumour cell, for treating cancers (e.g. cancer of the brain, lung, liver, kidney, lymph node, pancreas, small cintestine, blood cells, colon, stomach, breast, endometrium, prostate, contenting compounds in either the substance of cancer. CC CAR-1 may also be used in screening compounds for activity, in either contacting and interesting compounds for activity in either may also be used in screening compounds for activity in the
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         stimulating CAR-1 activity, overcoming the lack of CAR-1 or blocking the effect of mutant CAR-1 molecule. The gene for CAR-1 is lcated on
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                chromosome 1 (1p31-1p36). The present sequence is a BAC (bacterial artificial chromosome) containing part of the CAR-1 gene

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           2536
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       120
                                                                                                                                                                                                                                                                             The present invention relates to novel proteins and their coding sequences (ADC37168-ADC37455), which activate nuclear factor kappa B (NP-kappaB). The proteins and their coding sequences are useful for treating a disease associated with NF-kappaB activation, such as inflammation, autoimmune diseases, cancers, infectious diseases, bone diseases, AIDS, neurodegenerative diseases, or ischaemic disorders.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        240
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         360
                                                                                                                                                                                                                                                                                                                                                                                                                                                                               09
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 420

                                                                                                                                                                                                                                                                                                                                                                                                                                                                    à
       activity, and can be used in gene therapy and vaccine production. (1)

proteins and polynucleotides may be used in the prevention, diagnosis and
proteins and polynucleotides may be used in the prevention, diagnosis and
treatment of diseases associated with inappropriate (1) expression. For
example, they may be used to treat disorders sasociated with decreased
expression by rectifying mutations or deletions in a patient's genome
that affect the activity of (1) by expressing inactive proteins or to
supplement the patients own production of (1). Additionally, (1)
polynucleotides may be used to produce the secreted (1), by inserting the
nucleic acids into a host cell and culturing the cell to express the
protein. (1) proteins and polynucleotides may be used to prevent,
diagnose and treat immune/haematopoietic-related diseases, especially
cancers and cancer metastases of haematopoietic-derived cells. AAK64703
to AAK897694 represent human immune/haematopoietic antigen genomic
sequences from the present invention. AAK64912 to AAK64950 and AAM62169
represent sequences used in the exemplification of the present invention

```

New tumor suppressor CAR-1 polypeptides and polynucleotides, useful fo diagnosing cancer, for altering the phenotype of a tumor cell, for treating cancers or as a diagnostic or prognostic indicator of cancer.

Disclosure; Page 176-185; 185pp; English

contracting the producting a cell lacking denotates Fubrance for anti-tumnour activity by contacting a cell lacking functional CAR-1 polypeptide, with a candidate substance and determining the effect of the candidate substance on the cell, an anti-tumnour composition produced by contacting a cell lacking functional CAR-1 polypeptide, with a candidate contacting a cell lacking functional CAR-1 polypeptide, with a candidate contacting a cell lacking functional CAR-1 polypeptide, with a candidate inhibitor substance, and making a composition and a isolated and purified nucleic acid that hybridizes, under high cartingency conditions, to a DNA segment comprising about 15-3826 bases of the CAR-1 CDNA. The polynucleotide is useful for diagnosting cancer, for a terring the phenotype of a tumour cell, for treating cancers (e.g. cancer of the brain, lung, liver, kidney, lymph node, pancreas, small intestine, blood cells, colon, stomach, breast, endometrium, prostate, cother tissues), and as a diagnostic or prognostic indicator of cancer. CaR-1 may also be used in screening compounds for activity in either stimulating CAR-1 activity, overcoming the lack of CAR-1 or locking the effect of mutant CAR-1 molecule. The gene for CAR-1 is loated on chromosome 1 (ip31-ip36). The present sequence is a BAC (bacterial cutificial chromosome) containing part of the CAR-1 gene CAR-1 tumour suppressor in the cells of a tissue sample from a subject, methods for altering the phenotype of a tumour cell, methods for treating a subject with cancer by administering the tumour suppressor (CAR-1, or by administering a nucleic acid encoding the tumour suppressor (CAR-1 and a promoter active in eukaryotic cells, where the promoter is operably linked to the region encoding the tumour suppressor, a non-human transgenic eukaryote lacking a functional CAR-1 gene, a non-human transgenic eukaryote that over expresses CAR-1 as compared to a similar non-transgenic eukaryote, a method of screening a candidate substance for The invention relates to an isolated polynucleotide encoding a polypeptide being tumour suppressor, CAR-1. Also included are fragments of the polynucleotide from 15-500 nucleotides, fragments of the protein from 10-50 amino acids, an expression cassette comprising the polynucleotide under the control of a promoter operable in eukaryotic cells, a method for suppressing growth of a cancer cells by contacting the cells with the expression cassette (i.e. gene therapy), a cell comprising the expression cassette, an anti-CAR-1 monoclonal or polyclonal antibody, a hybridoma cell that produces the monoclonal antibody, a method of diagnosing a cancer by assessing the expression of antibody, a method of diagnosing a cancer by assessing the expression of

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        ò
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      g
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       complementary strand of a polyucicoltic complementary to the sequences defined in the specification, where the nucleotide comprises at least 15 nucleotides; or (b) a combination of an oligonucleotide comprising a sequence complementary to the complementary strand of a polyucicotide which comprises a 5'-end complementary to the complementary strand of a polyucicotide which comprises a 5'-end comprises a feast 15 nucleotides on the complementary to a polyucicotide comprising a sequence complementary to a polyucicotide which comprises at least 15 nucleotides and the combination of the 5'-end sequence is selected from those defined in the coligonucleotide comprises at least 15 nucleotides and the combination of the 5'-end sequence is selected from those defined in the coligonucleotide comprises are least 15 nucleotides and in primers are useful for synthesising polyucicotides, gene therapy. The primers are useful for synthesising polyucicotides, complementary full-length cDNAs. The primers are also useful for the full-length cDNAs. The primers allow obtaining of the full-length cDNAs. The primers allow obtaining of the full-length cDNAs and without any specialised methods. AAH13629 to AAH13628 and AAH13633 to AAH13632 represent human amino acid sequences; and AAH13629 to AAH13632 represent measure invaries.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    rccacadadecreacadaracrearccradecreccreadadecreacidec 2189
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 120
                                                                                                             88
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  180
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                09
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     The present invention describes primer sets for synthesising 5602 full-length cDNAs defined in the specification. Where a primer set comprises:
(a) an oligo-dT primer and an oligonucleotide complementary to the
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                Primer sets for synthesizing polynucleotides, particularly the 5602 full length cDNAs defined in the specification, and for the detection and/or diagnosis of the abnormality of the proteins encoded by the full-length
                                                                                                detection; diagnosis; antisense therapy; gene therapy;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       CACCCCCACACAAGAACTATATGGTTCCTACTTCTCCCCACTGATCTGCTGGTCAGTGAT

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   ŏ
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      AAK54951 to AAK64702 encode the human immune/haematopoietic antigen (I) amino acid sequences given in AAM82170 to AAM91921. (I) have cytostatic acitivity, and can be used in gene therapy and vaccine production. (I) proteins and polynucleotides may be used in the prevention, diagnosis and treatment of diseases associated with inappropriate (I) expression. For example, they may be used to treat disorders associated with decreased expression by rectifying mutations or deletions in a patient's genome that affect the activity of (I) by expressing inactive proteins or to supplement the patients own production of (I). Additionally, (I) supplement the patients own production of (II). Additionally, (I) or uncleic acids into a host cell and culturing the cell to express the protein. (I) proteins and polynucleotides may be used to prevent, diagnose and treat immune/haematopoietic-related diseases, especially answers.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                1421
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               1242 GGTATACCCAAAGCTGATGCAAAGCCCATTAGCCTAAAAGCAACTGCAGGACAAGCCTCC 1301

New tumor suppressor CAR-1 polypeptides and polymucleotides, useful for diagnosing cancer, for altering the phenotype of a tumor cell, for treating cancers or as a diagnostic or prognostic indicator of cancer.

Disclosure; Page 149-157; 185pp; English.

The invention relates to an isolated polynucleotide encoding a polypeptide being tumour suppressor, CRR-1, Also included are fragments of free propriate being tumour suppressor, CRR-1, Also included are fragments of from 10-50 amino acide, an expression cassette comprising the enkaryotic polynucleotide under the control of a promoter operable in eukaryotic cells, a method for suppression cassette (i.e. gene therapy), a cell comprising the expression cassette (i.e. gene therapy), a cell comprising the expression cassette (i.e. gene therapy), a cell comprising the expression cassette (i.e. gene therapy), a cell comprising the expression cassette (i.e. gene therapy), a cell comprising the expression cassette (i.e. gene therapy) a cell comprising the expression of a tissue sample from a subject, antibody, a method of diagnosing a cancer by assessing the expression of cast-1 tumour suppressor cast-1 and a proper comprised for the phenotype of a tumour suppressor CAR-1, or by proported for the phenotype of a tumour suppressor CAR-1 and a proper cast cast-1 and a proper cast cast-1 and a proper cast cast-1 and a cancer and cast-2 and antibody, a method of cast-3 and

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               The present invention relates to novel proteins and their coding sequences (ADC37168-ADC37455), which activate nuclear factor kappa B (NP-kappaB). The proteins and their coding sequences are useful for treating a disease associated with NP-kappaB activation, such as inflammation,

```
The present invention relates to novel proteins and their coding sequences (ADC37168-ADC37455), which activate nuclear factor kappa B (NF-kappaB). The proteins and their coding sequences are useful for treating a disease associated with NF-kappaB activation, such as inflammation, autoimmune diseases, cancers, infectious diseases, bone diseases, AIDS, neurodegenerative diseases, or ischaemic disorders.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             GGGCCTCCCTTGGGCAAAAGGAATTGTCAGCCCTACCCCAAACCCTTCAACTACCAGAATC

Primer sets for synthesizing polynucleotides, particularly the 5602 full-length cDNAs defined in the specification, and for the detection and/or diagnosis of the abnormality of the proteins encoded by the full-length Saito K, Ya Otsuki T;

Claim 3; SEQ ID NO 8653; 2537pp + Sequence Listing; English.

The present invention describes primer sets for synthesising 5602 fulllength cDNAs defined in the specification. Where a primer set comprises:

(a) an Oilgo-dr primer and an oilgonucleotide complementary to the
complementary strand of a polynucleotide which comprises one of the 5602

nucleotide sequences defined in the specification, where the
oilgonucleotide comprises at least 15 nucleotides; or (b) a combination
of an oilgonucleotide comprising a sequence complementary to the
complementary strand of a polynucleotide which comprises a 5'-end
sequence and an oilgonucleotide comprises a sequence complementary to a
complementary strand of a polynucleotide which comprises a fixed
complementary strand of a polynucleotide which comprises a fixed
complementary strand of a polynucleotide of sequence of sequence of the fixed sequence of the fixed sequence of sequence of sequence of sequence of sequence of sequence of sequence of sequence of sequence of the fixed of the fixed of the primer sets can be used in antisense therapy and in
cyparticularly full-length cDNAs. The primers are also useful for the full-length cDNAs. The primers are also useful for the full-length cDNAs. The primers allow obtaining of the full-length cDNAs and may specialised methods. AAH13612 and
AAH13613 to AAH18742 represent human cDNA sequences; AAB92446 to AAB95893
collgonucleotides, all of which are used in the exemplification of the present invention

New oligonucleotide libraries comprising oligonucleotides which selectively hybridize to mRNAs transcribed from a transcription unit of genome, useful for detecting tissue-, pathology-, and developmentalŝ Faigler Mintz L, ы Mintz Ą, Shoshan A, Wasserman WPI; 2002-257383/30. specific denes.

๙

Example 1; SEQ ID NO 16197; 47pp; English.

The present invention describes oligonucleotide libraries for detecting messenger RNAs that populate a (sub-)transcriptome, where the (sub-)transcriptome comprises messenger RNAs transcribed from multiple transcription units that populate a genome. The library comprises several oligonucleotides, each capable of hybridising selectively to a set of messenger RNAs transcribed from a given transcription unit of the genome, which encodes one or more messenger RNA splice variants. The oligonucleotide libraries are useful for detecting mRNAs from a biological sample, in expression profiling studies, in qualitatively or quantitatively characterising the corresponding transcriptome, and in detecting RNA transcripts and splice variants of human or animal transcriptomes. The libraries may also be used as specialised mini

```
libraries to detect transcripts of a sub-transcriptome under a particular biological or pathological state, and so allowing the detection of tissue spathology-specific genes such as those genes only expressed in specific tissue under a specific pathological condition, to detect developmental specific genes; and to detect RNA transcripts and splice variants of a transcriptome of a patient suffering from a particular disorder. ANX27253 to ABN5589 represent oligonuclectide sequences from rats, humans and mice, which are used in the exemplification of the present invention. N.B. The sequence data for this patent did not form part of the printed specification, but was obtained in electronic format directly from WIPO at ftp.wipo.int/pub/published_pct_sequences

New nucleic acid for producing a polypeptide, detecting differentially expressed genes correlated with a cancerous state of a mammalian cell, and inhibiting tumor growth.

Claim 1; SEQ ID NO 3775; 883pp + Sequence Listing; English.

The invention relates to an isolated polynucleotide (ABN27253-ABN33262) with cytostatic activity. The polynucleotide is used to produce a colynpetide, to detect differentially expressed genes correlated with a cancerous state of a mammalian cell and to inhibit tumour growth. The polynucleotide is used as a probe in mapping and tissue profiling. The encoded polypeptide and antibodies to the polypeptide can also be used for therapeutic and diagnostic purposes. The polynucleotide is useful for the rearapy. Note: The sequence data for this patent did not form part of the printed specification, but was obtained in electronic format from WIPO at ftp.wipo.int/pub/published pct seguences

The invention relates to the isolation of genes AACS9507-C59556 encoding generate fusion proteins AAB34218-B34264) The genes can be used to generate fusion proteins by linking to the gene for the human compared to immunoglobulin G Fc portion (AACS498) for increasing the stability of the fusion protein as compared to the human protein only. The genes and the fusion protein are useful for preventing, ameliorating or treating medical conditions, e.g. by protein or gene therapy. The genes are isolated from a range of human tissues disclosed in the specification. The nucleic acids, proteins, antibodies and (ant)agonists are useful in the diagnosis, treatment and prevention of: (a) cancer, e.g. breast and ovarian cancer, and other cancers of the adrenal gland, bone, bone ovarian cancer, and other cancers of the adrenal gland, bone, bone immune disorders e.g. Addison's disease, allergies, autoimmune hamolytic anaemia, autoimmune thyroiditis, diseases allergies, autoimmune hamolytic candenvascular disorders such as myocardial ischaemias; (d) wound healing conditions diseases e.g. cardiovascular diseases e.g. exrebral anoxia and epilepsy; and (f) conditions diseases such as viral, bacterial, fungal and parasitic

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        harmful or toxic effects are efficiently avoided. Unnecessary and potentially harmful treatment of those subjects who do not respond to the treatment with substances (nonresponders), as well as the development of drug resistances due to suboptimal drug dosing can be avoided. ACF62200 to ACF62751 and ABM34912 to ABM35013 represent sequences used in the
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            The present invention describes the use of irinotecan (I) or its derivative for the preparation of a pharmaceutical composition for treating colorectal, cervical, gastric, lung, ovarian or pancreatic cancer, or malignant glioma in a subject having a genome with a variant allele which comprises a cytochrome p450, subfamily IIIA (nifedipine allele which comprises a cytochrome p450, subfamily IIIA (nifedipine cytostatic activity. The therapeutic applications of (I) is improved, since it is possible to individually treat a subject with an appropriate desage and/or an appropriate derivative of (I). Therefore, undesirable,

its derivative for the preparation of a pharmaceutical composition for treating colorectal, cervical, gastric, lung, ovarian or pancreatic cancer, or malignant glioma in a subject having a genome with a variant allele which comprises a multidate presistance protein I (MRP1) polynucleotide (II). (I) has cytostatic activity. (I) or its derivative can be used for the preparation of a pharmaceutical composition for treating colorectal, cervical, gastric, lung, ovarian or pancreatic cancer, or malignant glioma in a mouse. The present sequence represents a sequence which is used in the exemplification of the present invention.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              Gaps

The present invention describes a method for the use of irinotecan

Disclosure; SEQ ID NO 669; 100pp; English.

polynucleotide.

Use of irinotecan or its derivative for preparation of a pharmaceutical composition for treating cancer in a subject having a genome with a variant allele comprising a multidrug resistance protein 1

(EPID-) EPIDAUROS BIOTECHNOLOGIE AG.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                  à
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    ó,
                                                                                                                                                                                                                                                                                                The invention relates to the novel use of irinotecan to treat a patient suffering from cancer. This involves determining if the patient has one or more variant alleles of the UGTAH gene, and if the patient has one or more of such variant alleles, irinotecan is administered in an increased or decreased amount in comparison to the amount that is administered without regard to the patient's alleles in the UGTAH gene. The invention has cytostatic activity. A composition of the invention acts as a topoisosmerase I inhibitor. The method is useful for treating a patient, an animal e.g. mouse or a human preferably African or Asian, suffering from cancer such as colorectal, cervical, gastric cancer, lung, ovarian, pancreatic cancer or malignant gliona. The present sequence is udes in the exemplification of the invention.
                                                                                                                                                                                                                                  Use of irinotecan to treat cancer patient by determining if patient has variant alleles of UGTIAl gene, administering increased/decreased amounts of irinotecan based on increased/decreased levels of UGTIAl gene product.
                                                                                                                                                                                                                                                                                                                                                                                                                                                      Sequence 189013 BP; 53603 A; 38975 C; 39348 G; 57087 T; 0 U; 0 Other;

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   q
```

```
The invention relates to the novel use of irinotecan or its derivative for the preparation of pharmaceutical compositions for treating colorectal, cervical, gastric, lung, ovarian or pencreatic cancer, or malignant glioma in a subject having a genome with a variant allele which comprises a multidrug resistance 1 (MDR1) polynucleotide. A composition of the invention has cytostatic activity. The invention is useful for the preparation of pharmaceutical compositions for treating colorectal, cervical, gastric, lung, ovarian or pancreatic cancer, or malignant glioma in a subject (preferably human, more preferably African or Asian) or a mouse. The present sequence is used in the exemplification of the
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      New use of irinotecan for preparation of pharmaceutical compositions for treating cancer in subject having genome with variant allele comprising multidrug resistance 1 polynucleotide.
                                                                                                                                                                                                                 New use of irinotecan for preparation of pharmaceutical compositions for treating cancer in subject having genome with variant allele comprising multidrug resistance 1 polynucleotide.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 irinotecan; colorectal cancer; cervical cancer; gastric cancer; lung cancer; ovarian cancer; pancreatic cancer; malignant glioma; multidrug resistance 1; MDR1; cytostatic; human; UGIIA1; MRD1; Ge.

The invention relates ro a novel use of irinotecan or its derivative for the preparation of a pharmaceutical composition for treating colorectal, cervical, gastrio, lung, ovarian or pancreatic cancer, or malignant glioma in a subject having a genome with a variant allele which comprises a multidrug resistance I (MDRI) polynucleotide. A composition of the invention has oppostation activity. The present sequence is used in the
                                                                                                                                                                                                                                                                                                                                                                    Human, colon cancer, cancer; tissue profiling; forensic; mapping; genetic analysis; diagnostic; antisense therapy; gene; ss.

the detection of the complementary nucleic acid is predictive of the level or pattern of the molecule. The LMFD nucleic acid is used for determining a level or pattern of a molecule in a bovine cell or tissue. It is useful for genome mapping, gene identification and analysis, cattle breeding, preparation of constructs for use in cattle gene expression, or
                                                                                                                                                                                                                                                                                                                             Claim 2; SEQ ID NO 6255; 245pp; English.

approximate the present incrementarity and the process of the ABQ60776 to ABQ60787 nucleic acid sequences. (I) can be used in antisense therapy. An antibody immunoreactive with a polypeptide encoded by the ABQ60776 to ABQ60787 nucleic acid sequences. (I) can be encoded by (I) is useful for detecting cancer in a patient sample, and for detecting the presence of a polymucleotide encoded by a nucleic acid which Mybridises to (I) in a cell. A probe/primer derived from (I) can be used for determining the phenotype of cells in a sample of colon cancer in a patient. (I) is useful for determining the presence of a nucleic acid which Mybridises to (I), and for determining the phenotype of cells in a sample of colon cancer in a cell or tissue type, for determining the presence of colon cancer in a cell or cissue type, for determining the presence or state of other type of cancer, in antisense therapy, to generate concerns a solid surface, to identify a chromosome on which the corresponding gene resides, and in tissue profilling, forensics, genetic analysis, mapping and diagnostic applications. (I) can be used to raise attibodies, and to screen for peptide analogues and antagonists

New isolated nucleic acid that is differentially expressed in cancer tissues useful for determining the presence of colon cancer in a cell or tissue type, and in antisense therapy.

ABQ56306 to ABQ60787 represent isolated nucleic acids (I) differentially

Claim 1; Fig 1; 796pp; English.

```
The invention relates to a purified nucleic acid molecule associated with lactation or muscle and fat deposition (designated LMFD), derived from cattle, and the LMFD nucleic acid can specifically hybridise to a second nucleic acid molecule comprising any of 15112 nucleotide sequences, appearing as ABX34836-ABX49947, or complements of them. Also included are comprising an invented acid linked to a promoter and a 3' non- translated sequence that functions in the cell to cause termination of transcription and addition of polyadenylated ribonucleotides to a 3' end of the mRNA molecule; and comprising a level or pattern of a molecule in a bovine cell or issue comprising; (a) incubating a marker nucleic acid sequences or its complement or fragment) with a complementary nucleic acid sequences or its complement or fragment) with a complementary nucleic acid between the marker nucleic acid and the complementary nucleic acid permits the detection of the molecule; and (b) detecting the level or pattern of the complementary nucleic acid permits the detection of the molecule; and (b) the complementary nucleic acid permits the detection of the molecule; and (c) the molecule of the molecule; and the complementary nucleic acid permits the detection of the molecule; and (b) the complementary nucleic acid permits the detection of the molecule; and (b) the molecule of the molecule.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   New nucleic acid associated with lactation, and muscle and fat deposition, useful for genome mapping, gene identification and analysis, cattle breeding, or for genetically improving cattle.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         Warren WC;

the detection of the complementary nucleic acid is predictive of the level or pattern of the molecule. The LMFD nucleic acid is used for determining a level or pattern of a molecule in a bovine cell or tissue. It is useful for genome mapping, gene identification and analysis, cattle breeding, preparation of constructs for use in cattle gene expression, or for genetically improving cattle. The present sequence is one of the 15112 bovine LMFD BST (expressed sequence tag) nucleic acids. Note: The present sequence was not shown in the specification but was obtained in electronic format from the USPPO web site: seqdata.uspto.gov/sequence.html?DocID=20020137139
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            ó
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              The invention relates to human breast cancer expressed polynucleotides (AAL07544-AAL26789) and methods of assessing whether a patient is afflicted with breast cancer by examining the correlation between the expression of certain markers and the cancerous state of breast cells. The polynucleotides and encoded polypeptides are potential markers for detecting, diagnosing, monitoring, characterising treating and potentially preventing breast cancer. The polynucleotides and encoded polypeptides are also useful for isolating compounds with cytostatic
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            Gaps
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           New peptide useful as a marker for the diagnosis of breast cancer.

and in diagnostic immunoassays e.g. recommendoassays or enzyme linked immunosorbent assays (ELISA). Disorders which are diagnosed or treated include autoimmune diseases e.g. rheumatoid arthritis, hyperproliferative disorders e.g. neoplasses of the breast or liver, cardiovascular disorders e.g. cardiac arrest, cerebrovascular disorders e.g. cardiac arrest, serebrovascular disorders e.g. cardiac arrest, serebrovascular disorders angiogenesis, nervous system disorders e.g. Alzhelmer's disease, infections caused by bacteria, viruses e.g. Alzhelmer's disease, e.g. corneal infection. The polypeptides can also be used to aid wound sumburn, to maintain organs before transplantation, for supporting cell culture of primary tissues, to regenerate tissues and in chemotaxis. The polypeptides can also be used as a food additive or preservative to
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         The sequence encodes a human secreted protein of the invention. The polynucleotides, polypeptides and antibodies raised against them are used to prevent, treat or ameliorate a medical condition in e.g. humans, mice, rabbits, goats, horses, cats, dogs, chickens or sheep. The
                    rheumatoid arthritis; hyperproliferative disorder; neoplasm; cardiovascular disorder; cerebrovascular disorder; cerebrovascular disorder; cerebral ischaemia; angiogenesis; Alzheimer's disease; bacterial infection; viral infection; fungal infection; corned healing; cell culture; epithelial cell proliferation; skin ageing; transplantation; tissue regeneration; chemotaxis; food additive; ss.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       rabbits, goats, horses, cats, dogs, chickens or sheep. The polynucleotides and antibodies are also used in diagnosing a pathological condition or susceptibility to a pathological condition. The antibodies can also be used in alleviating symptoms associated with the disorders
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           Nucleic acids encoding 37 human secreted polypeptides, useful for preventing, diagnosing and/or treating e.g. cancers, Parkinson's disease
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                Lung cancer-associated polynucleotide; gene; ds; cytostatic; emphysema;

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       The invention relates to a method for detecting a lung cancer—associated transcript in a cell from a patient, comprising contacting a biological sample from the patient with a polymucleotide that selectively hybridises to a sequence that is at least 80 % identical to a gene that exhibits increased or decreased expression in lung cancer samples. Lung cancer—associated polymucleotides and polypeptides are used for identifying a compound that modulates a lung cancer—associated polypeptide, for inhibiting proliferation of a lung cancer—associated cell to treat lung cancer in a patient and for treating a mammal having lung cancer by compound identified. The methods are useful for treating lung cancer, such as small cell lung cancer, non-small cell ung cancer or other bensyn or precancerous lesions, e.g. atelectasis, emphysema, bronchitis, chronic obstructive pulmonary disease, fibrosis, compounds that the genes, polymucleotides and polypeptides are useful compounds that modulate lung cancer, such as antibodies. Sequences or other harmoniat for screening for therapeutic compounds that modulate lung cancer, such as antibodies. Sequences
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   ABX76124-ABX76474 represent lung cancer-associated polynucleotides of the

```
The present invention describes a composition (I) comprising: carriers and immunostimulants, and a polypeptide (II) of a ovarian tumour polypeptide encoded by a polypucleotide (III) having a cDNA sequence (SI) from the 10912 nucleotide sequences as given in ABL77023 to ABL87934, (CIII) encoding (II) having a sequence (S2), a T cell population of (II), cor antigen presenting cells that express (II). (I) has cytostatic cor activity, An oligonucleotide (IV) that hybridises to (SI) can be used for detecting ovarian tissue. The method comprises contacting a biological sample from a patient with (IV), detecting the amount of polymucleotide hybridising to (IV) and comparing the amount to a predetermined cutoff cylubridising to (IV) and comparing the amount to a predetermined cutoff cylubrase chair reaction (PCN). (I) comprising (III) and/or (II) is cuseful for stimulating and/or expanding T cells specific for an ovarian tuesful for stimulating and/or expanding T cells specific for an ovarian consection (PCN). (II) comprising (III) or (III) or (III) or (III) or (III) or (III) or (III) or (III) or (III) or (III) or (III) or (III) or (III) or (III) is consection to the preparation of ribozyme molecules for inhibiting consecuence.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         expression of the tumour polypeptides and proteins in tumour cells; and to isolate a full length gene from a suitable library e.g., a tumour cDNA library using well known techniques
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          Composition for therapy and diagnosis of ovarian cancer comprising polypeptide of a ovarian tumor polypeptide, polynucleotide encoding polypeptide, antibody specific to polypeptide or T cell expressing
                                                                                                                                                                    Human; ovarian cancer; ovarian tumour; cytostatic; gene; ss.

Screening for anti-neoplastic agent involves exposing cells to a chemical agent to be tested for anti-neoplastic activity, and determining a change in expression of a gene of a signature gene set.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           The present invention describes a method (M1) for screening for an antinoplastic agent. The method involves exposing cells to a chemical agent to be tested for anti-neoplastic activity, determining a change in expression of at least one gene (I) of a signature gene set, where (I) comprises a sequence (S) selected from 8447 sequences (given in ABIG1664 to ABIZ7101), or is at least 95% identical to (S), where a change in expression is indicative of anti-neoplastic activity. (I) has cytostatic activity and can be used for producing a product which is the data collected with respect to the anti-neoplastic agent as a result properties of the agent, and can be used in the treatment of cancer and/or properties of the agent. M can be used in the treatment of cancer such properties of the agent.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               as colon, breast, stomach, lung, thyroid, oesophageal, ovarian, kidney, prostate or pancreatic cancer, adenocarcinoma, carcinoma, clear cell cancer, infiltrating ductal cancer, infiltrating lobular cancer, squamous cell carcinoma, neuroendocrine carcinoma, papillary carcinoma and Wilm's

Screening for anti-neoplastic agent involves exposing cells to a chemical agent to be tested for anti-neoplastic activity, and determining a change in expression of a gene of a signature gene set.

Claim 1; SEQ ID NO 2593; 44pp; English

of Mi, and the data is sufficient to convey the chemical structure and/or properties of the agent. Mi can be used in the treatment of cancer such as colon, breast, stomach, lung, thyroid, osophageal, ovarian, kidney, prostate or pancreatic cancer, adenocarcinoma, carcinoma, clear cell cancer, infiltrating ductal cancer, infiltrating lobular cancer, squamous cell carcinoma, neuroendocrine carcinoma, papillary carcinoma and Wilm's The present invention describes a method (M1) for screening for an antineoplastic agent. The method involves exposing cells to a chemical agent to be tested for anti-neoplastic activity, determining a change in expression of at least one gene (I) of a signature gene set, where (I) comprises a sequence (S) selected from 847 sequences (given in ABL61664 to ABL70110), or is at least 95% identical to (S), where a change in expression is indicative of anti-neoplastic activity. (I) has cytostatic activity and be used in gene therapy. MI can be used for screening an anti-neoplastic agent, and can be used for producing a product which is the data collected with respect to the anti-neoplastic agent as a result the data collected with respect to the anti-neoplastic agent as a result

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              The invention relates to a novel method for diagnosing and detecting the progression of liver cancer, hepatocellular carcinoma or metastatic liver tumour in a patient, and differentiating metastatic liver cancer from hepatocellular carcinoma in a patient, involving detecting the level of expression of two or more genes represented in ABN93503-ABN91455 in a tissue sample. The method of the invention has hepatotropic, and cytostatic activity. The method is useful for diagnosing and detecting the progression of liver cancer, hepatocellular carcinoma and metastatic liver carcinoma in a patient. The method is useful for identifying expression profiles which serve as useful diagnostic markers as well as markers that can be used to monitor disease tates, disease progression, markers that can be used to monitor disease tates, disease progression, where the cancer is the cancer of the cancer of the cancer of the cancer of the cancer of the cancer of the cancer of the cancer of the cancer of the cancer of the cancer of the cancer of the cancer of the cancer of the cancer of the cancer of the cancer of the cancer of the cancer of the cancer of the cancer of the cancer of the cancer of the cancer of the cancer of the cancer of the cancer of the cancer of the cancer of the cancer of the cancer of the cancer of the cancer of the cancer of the cancer of the cancer of the cancer of the cancer of the cancer of the cancer of the cancer of the cancer of the cancer of the cancer of the cancer of the cancer of the cancer of the cancer of the cancer of the cancer of the cancer of the cancer of the cancer of the cancer of the cancer of the cancer of the cancer of the cancer of the cancer of the cancer of the cancer of the cancer of the cancer of the cancer of the cancer of the cancer of the cancer of the cancer of the cancer of the cancer of the cancer of the cancer of the cancer of the cancer of the cancer of the cancer of the cancer of the cancer of the cancer of the cancer of the cancer of the cancer of the cancer of the cancer of
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   drug toxicity, drug efficacy and drug metabolism. Note: The sequence data for this patent did not form part of the printed specification, but was obtained in electronic format directly from WIPO at ftp.wipo.int/pub/published not some.

```

Gene #587 used to diagnose liver cancer.

```
Composition for therapy and diagnosis of ovarian cancer comprising polypeptide of a ovarian tumor polypeptide, polynucleotide encoding polypeptide, antibody specific to polypeptide or I cell expressing polypeptide.
                                                                                                                                                                                                                                                                                                           Human; ovarian cancer; ovarian tumour; cytostatic; gene; ss.

The present invention describes a composition (I) comprising: carriers and immunostimulants; and a polypeptide (II) of a ovarian tumour condition of a polypubly of a polypubly of a covarian tumour condition of the 10912 nucleotide sequences as given in ABL77031 to ABL87934, (III) encoding (II) having a sequence (S2), a T cell population of (II), or antigen presenting cells that express (II). (I) has cytostatic activity. An oligonucleotide (IV) that hybridises to (S1) can be used for activity. An oligonucleotide (IV) that hybridises to (S1) can be used for detecting ovarian cancer in a patient's biological sample preferably serum or ovarian tissue. The method comprises contacting a biological cample from a patient with (IV), detecting the amount of polymucleotide hybridising to (IV) and comparing the amount of polymucleotide hybridising to (IV) is detected preferably by collument of polymucleotide hybridising to (IV) is detected preferably by polymerase chain reaction (PCR). (I) comprising (III) and/or (II) is useful for stimulating and/or expanding T cells specific for an ovarian useful in design and preparation of ribozyme molecules for inhibiting expression of the tumour polypeptides and proteins in tumour cells; and the rumour polymerate a full length gene from a suitable library e.g., a tumour CDNA

The invention relates to a novel method for diagnosing and detecting the progression of liver cancer, hepatocellular carcinoma or metastatic liver tumour in a patient, and differentiating metastatic liver cancer from hepatocellular carcinoma in a patient, involving detecting the level of expression of two or more genes represented in ABN9563-ABN97455 in a tissue sample. The method of the invention has hepatotropic, and cytostatic activity. The method is useful for diagnosing and detecting the progression of liver cancer, hepatocellular carcinoma and metastatic liver carcinoma in a patient. The method is useful for identifying expression profiles which serve as useful diagnostic markers as well as markers that can be used to monitor disease states, disease progression, drug efficacy and drug metabolism. Note: The sequence data for this patent did not form part of the printed specification, but was contained in electronic format directly from WIPO at
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       ·

The invention relates to human polynucleotides encoding proteins associated with ovarian and endometrial cancers. The polynucleotides and the proteins they encode may be used in the prevention, diagnosis and treatment of diseases associated with the inappropriate expression of covarian and endometrial cancer polymeptides (ORCPS). For example, the polynucleotide (or an expression vector comprising the polynucleotide) and the ORCP may be used to treat disorders associated with decreased carper fact the activity of OECPs by expressing inactive proteins or to supplement the patients own production of them. Additionally, the polynucleotide may be used to produce the ORCPs, by inserting the nucleic polynucleotide and its complementary sequences may also be used as DNA probes in diagnostic assays to detect and quantitate the protein. The probes in diagnostic assays to detect and quantitate the presence of similar nucleic acids in samples, and therefore which patients may be in need of restorative therapy. The OBCPs may also be used as antigens in the production of anti-OBCP antibodies and in assays to identify and antiagonists may also be used to down regulate expression and activity. The anti-OBCP antibodies and antiagonists for The anti-OBCP antibodies was also be used to down regulate expression and activity. The anti-OBCP antibodies and antiagonists for The anti-OBCP antibodies was also be used as antigens for the anti-OBCP antibodies was also be used as deforming the anti-OBCP antibodies may also be used as used as deforment and activity. The anti-OBCP antibodies and activity in the anti-OBCP antibodies was also be used as used as antigent and activity. The anti-OBCP antibodies and activity is the anti-OBCP antibodies may also be used as used as used as antigens and antiagonists may also be used to down regulate expression and activity.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       Bovine, ss; EST; expressed sequence tag; lactation; LMFD; muscle deposition; fat deposition; genome mapping; gene identification; gene analysis; cattle breeding.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             present sequence is a ovarian and endometrial cancer linked cDNA of
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 detecting the presence of OECP in samples (e.g. by enzyme_linked immunosorbant assay (ELISA)) and hence diagnose patients with cancers.
                                                                                                                                                                                                                                                                                                                                         Nucleic acids encoding 222 polypeptides associated with ovarian and endometrial cancers, useful for diagnosing, preventing and treating
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      Bovine EST associated with lactation/muscle/fat deposition #1456.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         Sequence 330 BP; 83 A; 76 C; 64 G; 103 T; 0 U; 4 Other;

The invention relates to a purified nucleic acid molecule associated with lactation or muscle and fat deposition (designated LMFD), derived from cattle, and the LMFD nucleic acid can specifically hybridise to a second nucleic acid molecule comprising any of 15112 nucleotide sequences, appearing as ABX34836-ABX49347, or complements of them. Also included are ppearing as ABX34836-ABX49347, or complements of them. Also included are comprising an LMFD nucleic acid linked to a promoter and a 3' non-translated sequence that functions in the cell to cause termination of transcription and addition of polyadenylated ribonucleotides to a 3' end of the mRNA molecule; and (2) determining a level or pattern of a molecule in a bovine cell or tissue comprising: a level or pattern of a molecule acid (comprising any of the 15112 nucleic acid molecule obtained from the bovine cell or complementary nucleic acid molecule obtained from the bovine cell or cissue, where hybridisation between the marker nucleic acid and the complementary nucleic acid permits the detection of the molecule. The LMFD mucleic acid, where the detection of the molecule. The LMFD nucleic acid is predictive of the complementary nucleic acid is predictive of the complementary nucleic acid is predictive of the complementary nucleic acid is predictive of the complementary nucleic acid is predictive of the complementary nucleic acid is predictive of the complementary nucleic acid is predictive of the complementary nucleic acid is predictive of the complementary nucleic acid is predictive of the complementary nucleic acid is predictive of the complementary nucleic acid is predictive of the complementary nucleic acid is predictive of the complementary nucleic acid is predictive of the complementary nucleic acid is predictive of the complementary nucleic acid is predictive of the complementary nucleic acid is predictive of the complementary nucleic acid is predictive of the complementary nucleic acid is predictive of the complementary nucleic acid is predictive of t
                                                                                                                                                                                                                                                                                                                                                                                           New nucleic acid associated with lactation, and muscle and fat deposition, useful for genome mapping, gene identification and analysis, cattle breeding, or for genetically improving cattle.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                Gaps

The present DNA sequence corresponds to an expressed sequence tag (EST) identified from an analysis of murine genes that are up- or down-correlated during a wound healing response, with or without the inflammatory response usually occurring in healing wounds. The gene that encodes this EST encodes a protein important in the late, advanced phase of wound healing, i.e. in the cessation of the healing response, and remodelling of the repaired tissue. A gene comparising this EST, a protein encoded by the gene, the human homologue of the gene, and of this novel target (e.g. antibodies, antisense oligonucleotides and ribodies or biomarker derived from the gene are claimed. Antagonists and inhibitors of this novel target (e.g. antibodies, antisense oligonucleotides and ribozymes) can be used to treat wounds or disorders characterised by excessive wound healing, such as scarring, fibrosis, restenosis post-companies, post-traumatic/surgical adhesions of the peritoneal cavity, cioints and ligaments, psoriasis, benign prostatic hyperplasia, glaucoma or peripheral nerve injury. Agonists or activators of this target (e.g. the target protein delivered by means of gene therapy) can be used to treat a disease or disorder characterised by impaired healing response, cuch as chronic dermal ulcers, oral mucocystis, emphysema, ulcerative claseases of the gastrointestinal tract and cystitis. Methods are provided individual with the progress of wound healing and for identification of
                                                                                                                             Novel wound healing biomarkers including genes and protein products identified as being involved in wound healing purposes, useful for identifying compounds for treating wounds, wound healing disorders or
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     1.9%; Score 25; DB 7; Length 390; 100.0%; Pred.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            The invention relates to human breast cancer expressed polynucleotides (AALO7544-AAL26789) and methods of assessing whether a patient is afflicted with breast cancer by examining the correlation between the expression of certain markers and the cancerous state of breast cells. The polynucleotides and encoded polypeptides are potential markers for detecting, diagnosing, monitoring, characterising treating and polypeptides are also useful for isolating compounds with cytostatic activity
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        Gaps
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         antipsoriatic; cytostatic; ophthalmological; antiulcer; gene therapy; expressed sequence tag; EST; ss.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                          New peptide useful as a marker for the diagnosis of breast cancer.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           .

The invention relates to an isolated polynucleotide comprising any one of 38043 CDNA sequences, appearing as ACH12789-ACH50831, whose sequence was determined by the technique of SBH (sequencing by hybridisation). Also included is a purified polypeptide comprising a sequence corresponding to a reading frame of the novel polynucleotide. The nucleic acid sequences are useful in diagnostics as expressed sequence tags (EST) for identifying expressed genes or for physical mapping of the human genome, in forensics, in assessing biodiversities, or in identifying mutations responsible for genetic disorders and other traits. The nucleotide sequences are also useful as hybridisation probes, as oligomers for PCR,
                  specification or its complement. (I) is useful for: (a) assessing whether a patient is afflicted with prostate cancer; (b) monitoring the progression of prostate cancer in a patient; (c) assessing the efficacy of a test compound to inhibit prostate cancer in a patient; (d) assessing the efficacy of a therapy for inhibiting prostate cancer in a patient; (e) selecting a composition for inhibiting prostate cancer in a patient; (f) assessing the prostate cell carcinogenic potential of a compound; (g) assessing the prostate cancer has metastasized in a patient; (h) assessing the aggressiveness or indelence of prostate cancer in a patient
                                                                                                                                                                                                                                                                                               ö
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     New polynuclectide sequences obtained from various cDNA libraries, useful as hybridization probes, as oligomers for PCR, for chromosome and gene mapping, in the recombinant production of protein, or in generating
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     Human; ss; sequencing by hybridisation, SBH; expressed sequence tag; EST; genome mapping; biodiversity; genetic disorder.
                                                                                                                                                                                    ; (I) is also useful as a pharmacodyanamic or pharmacogenomic marker
                                                                                                                                                                                                                                                                                                Gaps

Bovine EST associated with lactation/muscle/fat deposition #8587.

(first entry)

21-FEB-2003

ABX43422;

The present sequence

Bovine; ss;

ABX43422 standard; cDNA; 464 BP.

```
for chromosome and gene mapping, in the recombinant production of protein, or in generating antisense DNA or RNA. The purified polypeptide is useful for generating antisense DNA or RNA. The purified polypeptide is one of the 38043 isolated cDNA/EST sequences. Note: The sequence for this part of the printed specification, but was obtained in electronic format directly from USPTO at sequence. Sequence contains a sequence contains a sequence contains a sequence contains a sequence contains a sequence contains a sequence contains a sequence contains a sequence contains a sequence contains a sequence contains a sequence contains a sequence contains a sequence contains a sequence contains a sequence contains a sequence contains a sequence contains a sequence contains a sequence contains a sequence contains a sequence contains a sequence contains a sequence contains a sequence contains a sequence contains a sequence contains a sequence contains a sequence contains a sequence contains a sequence contains a sequence contains a sequence contains a sequence contains a sequence contains a sequence contains a sequence contains a sequence contains a sequence contains a sequence contains a sequence contains a sequence contains a sequence contains a sequence contains a sequence contains a sequence contains a sequence contains a sequence contains a sequence contains a sequence contains a sequence contains a sequence contains a sequence contains a sequence contains a sequence contains a sequence contains a sequence contains a sequence contains a sequence contains a sequence contains a sequence contains a sequence contains a sequence contains a sequence contains a sequence contains a sequence contains a sequence contains a sequence contains a sequence contains a sequence contains a sequence contains a sequence contains a sequence contains a sequence contains a sequence contains a sequence contains a sequence contains a sequence contains a sequence contains a sequence contains a sequence contains a sequence contains a sequence con

The invention relates to a purified nucleic acid molecule associated with lactation or muscle and fat deposition (designated LMED), derived from cattle, and the LMFD nucleic acid can specifically hybridise to a second nucleic acid molecule comprising any of 15112 nucleotide sequences.

(c) attansformed cell having a nucleic acid comprising an LMFD nucleic acid linked to a promoter and a 3' non-translated sequence that acid linked to a promoter and a 3' non-translated sequence that cfunctions in the cell to cause termination of transcription and addition of polyadenylated ribonucleotides to a 3' end of the mRNA molecule; and (2) determining a level or pattern of a molecule in a bovine cell or tissue comprising; (a) incubating a marker nucleic acid (comprising any of the 15112 nucleic acid sequences or its complement or fragment) with a complementary nucleic acid sequences or its complement cell or complementary nucleic acid marker nucleic acid and the complementary nucleic acid marker nucleic acid and the complementary nucleic acid marker nucleic acid and the complementary nucleic acid bermits the detection of the molecule; and (b) detecting the level or pattern of the complementary nucleic acid is practicity of the detection of the molecule; nucleic acid is practicity of the molecule in a bovine cell or tissue.

C the detection of the molecule. The LMED nucleic acid is used for the molecule in a bovine cell or tissue.

C the intermining a level or pattern of a molecule in a bovine cell or tissue.

C the determining a level or pattern of molecule in a bovine cell or tissue.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          It is useful for genome mapping, gene identification and analysis, cattle breeding, preparation of constructs for use in cattle gene expression, or for genetically improving cattle. The present sequence is one of the 15112 bovine LMFD EST (expressed sequence tag) nucleic acids. Note: The
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             present sequence was not shown in the specification but was obtained in electronic format from the USPTO web site:
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         Claim 2; SEQ ID NO 8587; 245pp; English.
sequence tag (EST) cDNA sequences given in ACF03896 to ACF03943 (SEQ ID NO:1 to 50, where SEQ ID NO:16 and 44 have not been given in the specification), isolated from a rice cDNA library. The ESTs are described as expression sequence labels. Also described are gene chips constituted from the expression sequence labels. The expression sequence labels can be used for DNA sequencing to a configured rice endosperm cDNA library
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        Rice endosperm specific expression sequence label and gene chip prepared
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        1.9%; Score 25; DB 7; Length 433; 00.0%; Pred. ```
Total RNA was extracted from 120 leeches, Hirudo medicinalis. An aliquot of the poly A+ mRNA was used as template in a reverse transcription in the presence of the synthetic primer A (AAQ7485) which provides the presence of the synthetic primer A (AAQ7485) which provides complementarity to the polyA sequence of the various mRNAs. Following complementarity to the polyA sequence of the various mRNAs. Following contralised ss cDNA, the mRNA was degraded. An aliquot of the neutralised sc cDNA was then subjected to PCR amplification using as reverse primer the synthetic degenerative DNA oligomer B (AAQ74394). This contralised to primer was prepd. in accordance with the first nine N-terminal AAS of the naturally occurring FXa inhibitor and encodes the first nine N-terminal AAS in AAR62518. The PCR amplification products were loaded onto agarose gel. Three distinct bands of about 350bp, 450 bp and 700 bp were observed. The bands were hybridised to a synthetic radiolabeled DNA probe (probe C) corresp. to N-terminal AAS 14-19 of AAR62518. The three CC products were found to hybridise with probe C. However, the band corresp. to 700 bp was found to hybridise relatively poorly to the 350 bp and 450 bp fragments. The DNA was purified, digested, and subcloned into gpse56 which was used to transform E.coli strain MC1061. Transformants correening using probe C. Plasmid DNA was prepd. from positive clones. Two classes of clones were obtd.: (a) those with an insert of about 450 bps. By EAS6-XI-4 contains an insert of about 450 bps. 1ts DNA equence and deduced AA sequence are given in AAQ74392/R62516. (Updated on 25-MAR-2003 to correct by Field.)
```

```
Total RNA was extracted from 120 leeches, poly A+ mRNA was isolated and used as template in a reverse transcription reaction in the presence of primer A (AAQ72958), which provides complementarity to the poly A complement of the various mRNAs. Following synthesis of the ss cDNA, the mRNA was degraded and the ss cDNA subjected to PCR amplification using as corrected primer the degenerative oligo B (AAQ72959) which was prepd. in concrete primer the degenerative oligo B (AAQ72959) which was prepd. in concrete primer the degenerative oligo B (AAQ72959) which was prepd. in correct of ints thine N- terminal AAs of Factor Xa inhibitor (FXAI) extracted from leech saliva. The PCR amplification products were loaded onto agarose gel, the bands blotted onto nitrocellulose paper and hybridised to a synthetic radiolabeled DNA prive (probe C (AAQ72962)) corresp. to N- terminal AAs 14-19 of leech saliva EXAI. Probe C was also correct transformants of the PCR amplified DNA. The DNA sequence conduced AA sequence of one of the positive clones pSPR6-XAI-4 (clone and deduced AA sequence of the naturally occurring RAX isolated from leech control is apparently due to a mistake by the DNA correct columns as all the course of the pCR. (Updated on 25-MAR-2003 to correct DNA field.) (Updated on 27-AUG-2003 to correct ON field.)
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                DB 2; Length 469; 7.3;

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   This sequence represents clone pSP65-Xal-4 which was amplified from DNA isolated from the European leech (Hirudo medicinalis). The open reading frame contains 5 internal stop codons when decoded from the first ATG initiation codon. No equivalent residués are given in the corresponding protein sequence. The fragment is a primary isolated and partially cenceded the leech Factor Xa inhibitor (FXal). The fragment was amplified by the primers AAV33941-V33942. The fragment was used as a probe to soreen a cDNA library for the FXal gene (AAV33940). The FXal protein is claimed to be useful in the treatment of influenza viral infection by corresponding the infection and re-infection cycle of cells by the virus. An activation enzyme implicated in the viral infection cycle has been shown to be similar to the chicken coagulation factor Xa and it is thought that the corresponding human protein may act in a similar manner. Thus

```
This sequence encodes a novel FXaI protein, isolated from the European leech (Hirudo medicinalis) clone pSP65-Xa1-4 which inhibits Factor XA activity. This fragment is used in the construction of a polypeptide which can be used to reduce the extent of blood coagulation and has the ventor and has the construction of a polypeptide which can be used to reduce the extent of blood coagulation and has the construct on the construction of a polypeptide which can be used to reduce the extent of blood coagulation and has the construct of the coagulation and has the coagulation and has the coagulation and has the coagulation and has the coagulation and has the coagulation and has the coagulation and has the coagulation and has the coagulation and has a coagulation and the coagulation and has a coagulation and an action of the coagulation and where val24 may be preceded by G1V, Z1 sa bsent or all or a part of the sequence Prol10-typis (For His G1V) as absent or all or a part of the sequence Prol10-typis (For His G1V) and the coagulation and where val24 may be preceded by G1V, Z1 sa bsent or all or a part of the sequence of X beginning with Pro as the amino-terminal sequence of Z beginning with Pro as the amino-terminal coagulation disorders, or a corebrovascular disorders with excessive blood coagulation disorders, or a cerebrovascular disorders or a part of the trauma, obesity, pregnancy, side affects of oral
Reducing blood coagulation - using factor Xa inhibitor polypeptides obtained from saliva of the European leech Hirudo medicinalis.
                                                                                                                                                                          Disclosure; Fig 5; 56pp; English.

The factor Xa sequence was isolated from the leech Hirudo medicinalis. It can be used to reduce the extent of blood coagulation or thrombosis or to prevent recurrent influenza infection

The invention relates to an antibody which specifically reacts with an epitope of a novel (unknown) polypeptide derived from Hirudo medicinalis. This polypeptide is an inhibitor of blood coagulation factor FXa and is diagnostic and therapeutic methods applied in conditions characterised by the excessive blood coagulation and thrombosis. The FXaI polypeptide is also used to prevent recurrent influenza infection. The monoclonal antibody specific for FXaI polypeptide is useful for purifying or detecting FXaI. The present sequence is DNA clone pSP65-XaI-4 encoding leech FXa inhibitor
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       /transl_except= [pos:286. 270, aa:Xaa)
